

Retail solutions

Personnel operating within the retail sector are increasingly being asked to deliver more with less resource, critical deployment deadlines must be met without fail and IT systems must be faultless, agile and robust.

As retail operations become ever more complex the agility and resilience of IT systems to manage a wide range of functionality from Point of Supply to Point of Sale, Customer Experience & Retention, Analytics, Security and Finance becomes ever more critical.

Workspace Technology will provide you with the expertise, resource, innovation and operational agility to meet your obligations in the delivery of your Critical IT Physical Infrastructure. Our highly resilient and efficient Edge Hybrid Modular IT infrastructure will protect your IT compute services that supports your local network, cloud connection and production activities, including bandwidth intensive content and latency sensitive applications.

Are you...

Seeking a uniformed solution?

Standardisation – Our standardisation of Network Critical Physical Infrastructure delivers resilient, efficient, cost-effective solutions that can be duplicated across the estate drastically reducing the time to deploy and accelerating delivery of rollout programmes.

Looking for efficiencies?

Efficient – Ultra-energy efficient repeatable infrastructure optimises IT energy consumption, minimises carbon emissions and waste, removes the need for one off design or costly use of consultants and increases operational effectiveness through remote monitoring and support.

Requiring resilience?

Resilient – Our expertly engineered NCPI solutions have redundancy and resilience built-in to ensure system availability.

Resource light?

Dedicated Project Team – Our in-house Pentagon 360° Service delivers the complete project from concept to completion providing your organisation with a dedicated team who will be completely familiar with your approach to the delivery of your schemes.

Experiencing procurement challenges?

Funding Assistance – We can provide options to assist in the funding of your projects including a range of leasing schemes and rolling contracts to suit your individual requirements.

Why choose us...

- We possess extensive experience of delivering Network Critical Physical Infrastructure (NCPI) across the retail estate from Corporate Offices to Regional Distribution Centres, Stores and Branches.
- All our services are provided in-house, from design to installation, where a dedicated project team will be completely responsible for the project ensuring it is delivered without imposing on your time or disrupting your business operations.
- Our holistic solution provision maximises your investment to reduce OPEX and CAPEX costs.
- We only deploy tried and tested NCPI centric equipment manufactured by the World's leading organisations, ensuring robust and uniform support regardless of location.

Standards & Accreditations

Solutions for the Retail Estate

ROBOs

Workspace Technology offers the perfect solution for ROBOs across the retail estate. Our prefabricated data centres are delivered as a box solution; pre-built, pre-tested and pre-configured. As they don't require their own room, they can be easily positioned within an office environment with minimal disruption.

Features and benefits include;

- Built-in Power and Cooling
- Soundproof Enclosure
- Security via Access Control & Surveillance

Hybrid Solutions

Hybrid data centre infrastructure provides a resilient solution, ensuring IT system availability - most organisations operate a cautious approach to the provision of their enterprise IT with a blend of on-site functionality coupled with cloud platforms and a separately located DR facility.

We assist with an organisations' hybrid approach to data centre and server room infrastructure, in the provision of colocation facilities for our clients. Our own data centre located centrally in the UK provides high levels of resilience, diverse extensive connectivity and power availability.

Corporate Headquarters

Within the HQ building the data centre will support operational departments spread across multiple floors. Often to improve resilience each department will have its own comms room or independent network enclosure. Our services include;

- Design & Build
- Repurposing
- Refurbishment
- Disaster Recovery

Stores & Branches

In-store features driven by technology provide a wide range of services to transform the retail experience, enabling retailers to retain existing customers, win new ones, widen product width and at the same time drive the improvement of in-store operational efficiencies to reduce cost.

Smartphone penetration, interactive kiosks, mobile payments, BLE technology, RFID tagged products and smart shopping cart, drive the need for on-site IT infrastructure.

Distribution & Fulfillment Centres

Modern Retail Distribution hubs are technology-driven, they run state-of-the-art IT systems providing order processing, transportation and warehouse management systems that receive goods, scan bar codes, locate and store products efficiently, pick/pack and process orders, and plan loads and accept returns.

Workspace Technology delivers the IT infrastructure that provides the platform on which distribution centre's IT systems sit.

Pentagon 360° Service

Delivering:

- Consultancy
- Design
- Build
- Maintenance
- Support

100% in-house. Our unique holistic approach offers improved communication, economies of scale, and complete peace of mind ensuring that your project is in safe hands during the lifetime of your data centre infrastructure.
