

Data Centre Audit

Workspace Technology's Data Centre Audit helps clients focus on the fulfilment of data centre 'best practice'. A Data Centre Audit takes the form of a non-intrusive data centre MOT designed to identify both good and bad practices throughout the facility.

Recommendations and guidance outlined within the Data Centre Audit are produced in-line with the following standards:

- European Commissions Code of Conduct for Data Centre Energy Efficiency 'Best Practice' Guide.
- TIA-942 Telecommunications Infrastructure Standard for Data Centres.
- Green Grid Recommendations.
- ASHRAE Guidelines.

What is involved?

The Data Centre Audit is undertaken by an experienced Data Centre Design Engineer who will attend site to review a wide range of aspects including, but not limited to:

- Room Cleanliness.
- Inspect Room Infrastructure (including walls, floors & ceilings).
- Review Cooling & Airflow Arrangements.
- Inspect Fire Protection Systems.
- Review Electrical Infrastructure (including backup systems).
- Review Management & Monitoring Systems.

The Engineer undertaking the audit will complete a detailed report. The detailed audit report will review each item and make comments in relation to findings and produce detailed recommendations where issues are identified and improvements can be made.

Benefits...

- Provides recommendations based on unrivaled expertise and experience by a specialist to assist in caring for your data centre.
- Helps to ensure that 'best practice' is maintained.
- Improves and maintains the energy efficiency of your data centre saving you money and time in the future.
- Reduces or eliminates completely the risk to unplanned downtime of service.

Our Data Centre Audit is designed to identify issues in relation to the design and ongoing operation of your data centre.

The Audit Report will highlight a range of recommendations detailing the predicted impacts that they will have on the overall data centre performance.

- Workplace (H&S & Welfare Regulations 1992).

Frequency...

Every 5 years or on a 'rolling' basis
- Part infrastructure per year.

Data Centre Solutions

When it comes to data centre design build and management, Workspace Technology delivers award-winning solutions for organisations across the UK. We have simplified the architecture from which we design and build data centre infrastructure and associated technology to support client availability, agility, energy efficiency and business needs.

Whether you require a state-of-the-art on-premise data centre build or if space and accessibility is a challenge a Modular or Micro data centre, you can be assured that Workspace Technology will deliver a quality, agile and sustainable solution.

Technical Prefabricated Buildings

Workspace Technology provides a comprehensive range of prefabricated modular and mobile buildings engineered for flexible, high-performance use across diverse industries. Our solutions include DataCube™ mobile data centres with integrated cooling, fire suppression, and IT infrastructure; SecureCube® high-security SCIFs and secure buildings with advanced physical, acoustic, and RF protection; and TelcoCube™ telecommunications cabins supporting fibre repeater stations, 5G base stations, and a wide range of other telecoms applications. We also offer prefabricated power and cooling modules for scalable technical infrastructure, and bespoke prefabricated solutions tailored to meet specific client requirements.

Maintenance & Support Services

We offer a wide range of services to support your data centre infrastructure to suit your business's demands. We are experienced and qualified to effectively support all your data centre equipment including; air-conditioning systems, chilled water systems, UPS, generators, fire suppression systems, environmental monitoring technology, DCIM and associated mission critical infrastructure.
